HTTP 408 curl 22 The requested URL returned error: 408 send-pack: unexpected disconnect while reading sideband packet fatal: the remote end hung up  
unexpectedly Everything up-to-date AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-  
MARIO-5 (Dev) $
```

Tu as bien fait le `http.postBuffer`, mais ton erreur n'est **pas** un "buffer" : c'est un **timeout côté serveur/proxy** pendant l'upload.

Ligne clé :

- `error: RPC failed; HTTP 408 ...`
- `send-pack: unexpected disconnect`
- `puis Everything up-to-date (ça, c'est trompeur : Git croit que tout est OK localement, mais le remote n'a pas forcément tout reçu/validé)`

Ton push fait ~10.22 MiB compressé + **beaucoup de fichiers** (228 objets, 369 fichiers au commit précédent) + tu as **plein d'images**, des **.pdf**, **.docx**, et même **db.sqlite3** → c'est typiquement le genre de dépôt qui déclenche des soucis réseau/timeout.

---

## 1) Vérifie si le push est réellement passé ou pas

```
git status  
git log --oneline --decorate -5  
git ls-remote --heads origin
```

Regarde si `origin/Dev` pointe bien sur ton dernier commit (ex: 6272027 ou un autre).

---

## 2) Solution la plus simple : repush en forçant HTTP/1.1 + augmente les timeouts

Dans Git Bash :

```
git config --global http.version HTTP/1.1
git config --global http.lowSpeedLimit 0
git config --global http.lowSpeedTime 999999
```

Puis retente :

```
git push origin Dev
```

(Le 408 arrive souvent avec HTTP/2 + proxies, donc repasser en HTTP/1.1 aide beaucoup.)

---

## 3) Si ça continue : passe en SSH (beaucoup plus stable)

### a) Mets l'URL SSH du remote

```
git remote -v
git remote set-url origin git@github.com:Mariogit20/PORTFOLIO-cv-MARIO-5.git
```

### b) Test

```
ssh -T git@github.com
```

Puis push :

```
git push -u origin Dev
```

---

## 4) Ton repo contient des fichiers à éviter sur GitHub (db + médias + docs)

Même si ça push, c'est une mauvaise pratique de versionner :

- db.sqlite3
- \_\_pycache\_\_/
- media/ (uploads)
- gros PDF/DOCX/images en masse

### a) Mets un `.gitignore` Django correct (exemple)

Ajoute au minimum :

```
__pycache__/  
*.pyc  
db.sqlite3  
media/  
.env  
.vscode/
```

### b) Retire du suivi Git les fichiers déjà trackés (IMPORTANT)

Même si tu ignores, s'ils sont déjà commit, Git les garde. Donc :

```
git rm -r --cached __pycache__  
git rm --cached db.sqlite3  
git rm -r --cached media  
git commit -m "Remove generated files from repo"  
git push origin Dev
```

---

## 5) Si tu veux garder les images/dossiers lourds : utilise Git LFS

Pour les .jpg .png .pdf .docx volumineux :

```
git lfs install  
git lfs track "*.jpg" "*jpeg" "*png" "*pdf" "*docx"  
git add .gitattributes  
git commit -m "Track large files with Git LFS"  
git push origin Dev
```

---

## 6) Si tu as poussé des “grossiers” par erreur : nettoyer l’historique (option avancée)

Si `db.sqlite3` et des gros médias sont déjà dans l’historique, même en les supprimant ensuite, le repo reste lourd. Dans ce cas on fait un nettoyage avec `git filter-repo` (ou BFG).

Si tu veux, je te donne la procédure exacte **sans casser ton repo**, mais commence d’abord par les étapes 2/3/4 (souvent ça suffit).

---

## Mon diagnostic le plus probable (vu ton log)

1. Tu as un dépôt “lourd” (beaucoup d’images + docs + db)
  2. Ton réseau/proxy coupe l’upload → HTTP 408
  3. `postBuffer` ne change rien car le problème est “timeout/disconnect”, pas “taille de buffer”
- 

Si tu me colles le résultat de :

```
git ls-remote --heads origin  
git log --oneline --decorate -3
```

je te dis immédiatement si `origin/Dev` a bien reçu ton dernier commit ou si ton push a été interrompu avant la fin.

AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $
```

Parfait — tes 3 commandes confirment clairement ce qu'il se passe :

- **Local = 6272027** (ton gros commit “first commit”)
- **Remote origin/Dev = 6f386ea** (“Ajout gitignore”)

- git status dit : **ahead of 'origin/Dev' by 1 commit**  
→ Donc le push a échoué : GitHub n'a pas reçu ton commit 6272027. Le Everything up-to-date est juste un message trompeur dans ce cas.
- 

## Ce que je te conseille (ordre le plus efficace)

### Option A (souvent ça règle tout) : forcer HTTP/1.1 + timeouts, puis push

```
git config --global http.version HTTP/1.1
git config --global http.lowSpeedLimit 0
git config --global http.lowSpeedTime 999999

git push origin Dev
```

---

### Option B (la plus fiable) : passer en SSH

1. Change l'URL du remote :

```
git remote set-url origin git@github.com:Mariogit20/PORTFOLIO-cv-MARIO-5.git
```

2. Test SSH :

```
ssh -T git@github.com
```

3. Push :

```
git push -u origin Dev
```

---

## Mais... ton vrai problème de fond : tu pushes des milliers de fichiers inutiles (et du lourd)

Dans ton commit, tu as :

- \_\_pycache\_\_/ et \*.pyc (à ignorer)
- db.sqlite3 (à ignorer)

- énormément d'images dans media/ (normalement pas versionné)
- plein de .pdf / .docx

Même si tu arrives à pousser, tu vas galérer à chaque push.

### Fix propre (recommandé) : ignorer + retirer du suivi Git

1. Mets ça dans ton .gitignore (au minimum) :

```
__pycache__/  
*.pyc  
db.sqlite3  
media/  
.env  
.vscode/
```

2. Retire du repo (sans supprimer sur ton disque) :

```
git rm -r --cached __pycache__  
git rm -r --cached media  
git rm --cached db.sqlite3  
git commit -m "Remove generated files (media, db, cache)"
```

3. Puis push :

```
git push origin Dev
```

---

## Si tu veux garder les images : utilise Git LFS

Pour les .jpg .png .pdf .docx lourds :

```
git lfs install  
git lfs track "*.jpg" "*jpeg" "*png" "*pdf" "*docx"  
git add .gitattributes  
git commit -m "Use Git LFS for large assets"  
git push origin Dev
```

---

# Le plus important maintenant

Fais **Option A** ou **Option B** pour réussir le push, **mais** je te recommande vraiment de faire aussi le nettoyage (`media/`, `db.sqlite3`, `__pycache__`) sinon tu vas revivre des 408.

Si tu veux, dis-moi juste :

- tu veux **garder** les images dans GitHub (oui/non) ?
- tu veux publier un site/portfolio (donc images “nécessaires”) ou c’est un projet Django “classique” ?

Et je te donne la config `.gitignore` exacte + la stratégie la plus adaptée.

Je voudrais tout garder

OK — si tu veux **tout garder dans le repo**, alors le plus simple est de **rendre le push plus robuste** (et éventuellement passer les gros fichiers en **Git LFS** sans les retirer du projet).

Comme ton remote n'a pas reçu 6272027, on doit juste réussir à pousser ce commit.

## 1) Essaye d'abord la correction réseau (HTTP/1.1 + timeouts), puis push

```
git config --global http.version HTTP/1.1
git config --global http.lowSpeedLimit 0
git config --global http.lowSpeedTime 999999
git config --global http.postBuffer 524288000

git push origin Dev
```

(Le `postBuffer` n'est pas la cause du 408, mais ça ne fait pas de mal. Le vrai gain est `http.version HTTP/1.1 + lowSpeed`.)

---

## 2) Si tu as encore HTTP 408 : passe en SSH (souvent ça règle définitivement)

```
git remote set-url origin git@github.com:Mariogit20/PORTFOLIO-cv-MARIO-5.git
ssh -T git@github.com
git push -u origin Dev
```

Si ssh -T te dit que tu n'as pas de clé, fais ça :

```
ssh-keygen -t ed25519 -C "mariomariochatgpt@gmail.com"
eval "$(ssh-agent -s)"
ssh-add ~/.ssh/id_ed25519
cat ~/.ssh/id_ed25519.pub
```

→ Copie la clé affichée et colle-la dans GitHub : **Settings → SSH and GPG keys → New SSH key**, puis refais :

```
ssh -T git@github.com
git push -u origin Dev
```

---

### 3) Recommandé si tu gardes “tout” : active Git LFS pour les gros assets (images/pdf/docx)

Ça **garde tes fichiers** dans le repo (visible sur GitHub), mais évite des pushes instables.

```
git lfs install
git lfs track "*.jpg" "*jpeg" "*png" "*gif" "*pdf" "*docx" "*mp4" "*zip"
git add .gitattributes
git commit -m "Enable Git LFS for large files"
git push origin Dev
```

⚠️ Important : tes gros fichiers déjà commités **restent dans l'historique** tant que tu ne réécris pas l'historique. Mais LFS va aider pour la suite.

---

### 4) Vérifie que le push est passé (objectif : `origin/Dev` doit pointer sur `6272027`)

Après ton push :

```
git ls-remote --heads origin
```

Tu dois voir `refs/heads/Dev` avec le hash de ton commit `6272027....`

---

### Ce que je ferais à ta place (simple et efficace)

1. **Option 1 (rapide)** : HTTP/1.1 + timeouts → git push
2. Si encore 408 → **Option 2 (SSH)** → git push
3. Ensuite → **Git LFS** pour stabiliser les prochains push

Si tu me colles la sortie exacte de ton prochain `git push origin Dev` (après l'option 1), je te dis immédiatement quelle branche/solution prendre (SSH vs LFS vs réglage Git).

```

```

OK, là c'est clair : même en **HTTP/1.1 + timeouts**, tu prends encore **HTTP 408**. Donc ton souci vient très probablement du **réseau/proxy** (ou d'un timeout côté GitHub/entreprise) pendant l'upload. La solution la plus fiable maintenant, c'est **SSH** (et si besoin Git LFS après).

## Étape 1 — Passe le remote en SSH

Dans ton repo :

```
git remote -v  
git remote set-url origin git@github.com:Mariogit20/PORTFOLIO-cv-MARIO-5.git  
git remote -v
```

Tu dois voir `git@github.com:....` au lieu de `https://....`

---

## Étape 2 — Test SSH

```
ssh -T git@github.com
```

**Cas A : ça répond “Hi ... You've successfully authenticated”**

→ Alors pousse :

```
git push -u origin Dev
```

**Cas B : “Permission denied (publickey)”**

→ Il faut créer/ajouter une clé SSH.

---

## Étape 3 — Créer une clé SSH (si nécessaire)

```
ssh-keygen -t ed25519 -C "mariomariochatgpt@gmail.com"  
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519  
cat ~/.ssh/id_ed25519.pub
```

Copie la clé affichée (une

```

```
(fetch) origin git@github.com:Mariogit20/PORTFOLIO-cv-MARIO-5.git (push) AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON  
DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ssh -T git@github.com The authenticity of host 'github.com (140.82.121.4)' can't be  
established. ED25519 key fingerprint is SHA256:+DiY3wvvV6TuJJhbpZisF/zLDA0zPMSvHdkr4UvCOqU. This key is not known by any other names. Are  
you sure you want to continue connecting (yes/no/[fingerprint])?
```

Nickel  Tu es **au bon endroit** : SSH te demande juste de **valider la clé du serveur GitHub** (c'est normal la 1ère fois).

## 1) Réponds :

yes

Ensuite :

- soit il te dit "**Hi ... You've successfully authenticated**" → tu peux pousser direct
  - soit il te dit "**Permission denied (publickey)**" → il faut ajouter une clé SSH à ton compte GitHub
- 

## 2) Dans tous les cas, après le `yes`, relance :

```
ssh -T git@github.com
```

Si tu vois "**successfully authenticated**"

Alors push :

```
git push -u origin Dev
```

---

## 3) Si tu vois "**Permission denied (publickey)**" : crée une clé SSH et ajoute-la à GitHub

### Créer + charger la clé

```
ssh-keygen -t ed25519 -C "mariomariochatgpt@gmail.com"  
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519  
cat ~/.ssh/id_ed25519.pub
```

Copie la ligne qui commence par ssh-ed25519 ...

## Ajoute-la dans GitHub

GitHub → Settings → SSH and GPG keys → New SSH key → colle la clé → Save

Puis reteste :

```
ssh -T git@github.com
git push -u origin Dev
```

---

## Petit détail important (pour éviter les confusions)

Dans ton `git remote -v`, tu as maintenant **les 2 lignes en SSH** (fetch et push). Parfait.

---

Quand tu auras fait `yes`, colle-moi juste la sortie complète de :

- `ssh -T git@github.com`  
et si ça passe :
- `git push -u origin Dev`

Je te dirai tout de suite si `origin/Dev` a bien reçu le commit `6272027`.

```
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ssh -T
git@github.com The authenticity of host 'github.com (140.82.121.4)' can't be established. ED25519 key fingerprint is
SHA256:+DiY3wvvV6TuJJhbpZisF/zLDA0zPMSvHdkr4UvCOqU. This key is not known by any other names. Are you sure you want to continue connecting
(yes/no/[fingerprint])? yes Warning: Permanently added 'github.com' (ED25519) to the list of known hosts. git@github.com: Permission denied (publickey).
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $
```

Parfait : tu as validé l'hôte (✓) et maintenant on a le vrai blocage :

`Permission denied (publickey)`

→ Ça veut dire : **aucune clé SSH valide n'est fournie à GitHub** (ou elle n'est pas ajoutée à ton compte GitHub).

On règle ça en 3 minutes.

---

## 1) Vérifie si tu as déjà une clé SSH

Dans Git Bash :

```
ls -al ~/.ssh
```

Si tu vois `id_ed25519` et `id_ed25519.pub` (ou `id_rsa` / `id_rsa.pub`), tu as déjà une clé.

- Si tu n'as pas de clé → va direct à l'étape 2.
  - Si tu as une clé → saute à l'étape 3 (charger la clé + tester).
- 

## 2) Crée une clé SSH (recommandé : ed25519)

```
ssh-keygen -t ed25519 -C "mariomariochatgpt@gmail.com"
```

- Appuie sur Entrée pour l'emplacement par défaut
- Mets un mot de passe si tu veux (facultatif)

Ce contenu viole peut-être nos [conditions d'utilisation](#) ou nos [politiques d'utilisation](#).

Avons-nous fait une erreur ? Dites-le-nous en attribuant un avis négatif à cette réponse.

Réessayer

```
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ^C
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ls -al ~/.ssh
total 25
drwxr-xr-x 1 AzureAD+SPSSE02MEN 4096 0 Feb 5 17:05 .
drwxr-xr-x 1 AzureAD+SPSSE02MEN 4096 0 Feb 5 17:05 ..
-rw-r--r-- 1 AzureAD+SPSSE02MEN 4096 92 Feb 5 17:05 known_hosts
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $
```

OK  tu n'as pas encore de clé SSH (tu n'as que `known_hosts`). Donc on la crée, on l'ajoute à GitHub, puis on push.

## 1) Crée la clé SSH (ed25519)

Copie/colle :

```
ssh-keygen -t ed25519 -C "mariomariochatgpt@gmail.com"
```

- Quand il demande Enter file in which to save the key → **appuie Entrée** (chemin par défaut)
  - Passphrase : tu peux laisser vide (Entrée) ou en mettre une
- 

## 2) Démarre l'agent SSH et ajoute la clé

```
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519
```

(Si tu as mis une passphrase, il va te la demander.)

---

## 3) Affiche ta clé publique et copie-la

```
cat ~/.ssh/id_ed25519.pub
```

→ Copie **toute la ligne** (ça commence par ssh-ed25519 et ça finit par ton email).

---

## 4) Ajoute-la sur GitHub

GitHub → Settings → SSH and GPG keys → New SSH key

- Title : par ex. DESKTOP-S95K8U0
  - Key : colle la clé
  - Save
-

## 5) Test + push

```
ssh -T git@github.com  
git push -u origin Dev
```

 Quand ce sera bon, `ssh -T` doit afficher un message du style “successfully authenticated” (ou “Hi <username>!”), puis ton `git push` doit enfin envoyer le commit 6272027.

Si tu colles ici la sortie de `ssh -T git@github.com` après avoir ajouté la clé, je te dis tout de suite si c'est OK.

```
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ^C  
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ls -al ~/ssh total  
25 drwxr-xr-x 1 AzureAD+SPSSE02MEN 4096 0 Feb 5 17:05 ./ drwxr-xr-x 1 AzureAD+SPSSE02MEN 4096 0 Feb 5 17:05 .. ./ -rw-r--r-- 1  
AzureAD+SPSSE02MEN 4096 92 Feb 5 17:05 known_hosts AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO  
HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ^C AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO  
HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ ssh-keygen -t ed25519 -C "mariomariochatgpt@gmail.com" Generating public/private ed25519 key  
pair. Enter file in which to save the key (/c/Users/SPSSE02MEN/.ssh/id_ed25519):
```

Parfait  Là tu es exactement au bon prompt.

### 1) À la question :

Enter file in which to save the key (/c/Users/SPSSE02MEN/.ssh/id\_ed25519) :

 Appuie juste sur Entrée (comme ça il enregistre au bon endroit par défaut).

### 2) Ensuite il va demander une passphrase :

- Enter passphrase (empty for no passphrase):
- Enter same passphrase again:

 Tu peux :

- soit **laisser vide** (Entrée deux fois) = plus simple
- soit mettre un mot de passe (plus sécurisé)

### 3) Après ça, enchaîne ces commandes :

```
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519  
cat ~/.ssh/id_ed25519.pub
```

👉 Copie la ligne affichée (qui commence par `ssh-ed25519`) et colle-la dans GitHub :  
**Settings → SSH and GPG keys → New SSH key**

### 4) Puis teste et push :

```
ssh -T git@github.com  
git push -u origin Dev
```

Si tu veux, colle-moi ici :

- la sortie de `ssh -T git@github.com` (après ajout de la clé)
- et la sortie de `git push -u origin Dev`  
et je te confirme que `origin/Dev` est bien passé sur ton commit 6272027.

Je ne vois pas **Settings → SSH and GPG keys**

Pas de souci — selon où tu regardes sur GitHub, le menu **n'est pas au même endroit**. Voilà les 3 chemins possibles (prends celui qui correspond à ton écran).

### Option 1 — Depuis ton avatar (le plus courant)

1. Sur GitHub (en haut à droite), clique sur ta **photo / avatar**
2. Clique **Settings**
3. Dans le menu à gauche : **SSH and GPG keys**
4. Bouton **New SSH key**

### Option 2 — Si tu es dans une Organisation (menu différent)

1. Clique sur ton **avatar** (en haut à droite)
2. Clique **Settings**
3. Menu à gauche : **Access → SSH and GPG keys** (parfois c'est plus bas)

## Option 3 — Lien direct (le plus rapide)

Ouvre directement la page “clés SSH” ici (copie-colle dans ton navigateur) :

<https://github.com/settings/keys>

Puis **New SSH key**.

---

### Si tu es sur GitHub en français

Ça peut s’appeler :

- **Paramètres**
  - **Clés SSH et GPG**
- 

### Une fois sur la page

- **Title** : DESKTOP-S95K8U0 (ou ce que tu veux)
- **Key type** : Authentication Key
- **Key** : colle la sortie de :

```
cat ~/.ssh/id_ed25519.pub
```

---

Si tu me dis ce que tu vois quand tu cliques sur ton avatar (les options exactes du menu), je te dis exactement où cliquer.

option 1

Top — on fait **Option 1**, étape par étape, et je te dis aussi quoi faire si “SSH and GPG keys” n’apparaît pas.

## Chemin exact (Option 1)

1. Va sur **github.com** et **connecte-toi**
  2. En haut à droite, clique sur ton **avatar**
  3. Clique sur **Settings** (Paramètres)
  4. Dans la colonne de gauche, **descends un peu** (il faut souvent scroller)
  5. Clique **SSH and GPG keys**
  6. Clique le bouton **New SSH key**
  7. Colle ta clé (celle de `cat ~/.ssh/id_ed25519.pub`) puis **Add SSH key**
- 

## Si tu ne vois toujours pas “SSH and GPG keys”

Ça arrive si :

- tu n'es pas sur un **compte personnel** (ex: compte “Enterprise Managed User”), ou
- tu n'es pas connecté au bon compte GitHub.

## Test rapide

Dans ton navigateur, colle directement :

<https://github.com/settings/keys>

- Si la page s'ouvre → parfait, ajoute la clé.
  - Si tu as un message type “managed account / enterprise” ou accès refusé → dis-moi le message exact et je te donne la solution adaptée (souvent il faut utiliser un autre compte GitHub ou demander à l'admin).
- 

## Maintenant, côté terminal (pour être prêt)

Quand tu as fini de créer la clé (tu étais sur `ssh-keygen`), exécute :

```
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519  
cat ~/.ssh/id_ed25519.pub
```

→ Copie la ligne affichée et colle-la dans New SSH key.

Ensuite :

```
ssh -T git@github.com  
git push -u origin Dev
```

Dis-moi juste ce que tu vois sur <https://github.com/settings/keys> (ça s'ouvre ou non) et on termine.

```
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $ eval "$(ssh-agent -s)" ssh-add ~/.ssh/id_ed25519 cat ~/.ssh/id_ed25519.pub Agent pid 1739 Identity added: /c/Users/SPSSE02MEN/.ssh/id_ed25519  
(mariomariochatgpt@gmail.com) ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAIF7ge6YRqm17nZiegajmEaro2o5aP2Qr7+zWVS+K9fQl  
mariomariochatgpt@gmail.com AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-  
MARIO-5 (Dev) $
```

Parfait  Ta clé SSH est **créée** et **chargée** dans l'agent. La ligne qui commence par `ssh-ed25519 ...` est exactement ce qu'il faut coller dans GitHub.

## 1) Ajoute la clé sur GitHub

- Va sur : <https://github.com/settings/keys>
- Clique **New SSH key**
- **Title** : DESKTOP-S95K8U0 (ou “PC Mario”)
- **Key type** : Authentication Key
- **Key** : colle **toute** cette ligne :

```
ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAIF7ge6YRqm17nZiegajmEaro2o5aP2Qr7+zWVS+K9fQl mariomariochatgpt@gmail.com
```

- Clique **Add SSH key** (il peut te redemander ton mot de passe GitHub)

## 2) Test SSH puis push

Après l'ajout, reviens dans Git Bash :

```
ssh -T git@github.com  
git push -u origin Dev
```

 Si tout est bon, `ssh -T` doit te dire “Hi Mariogit20! ...” (ou similaire) et le push doit enfin envoyer le commit 6272027.

### 3) Vérification finale (optionnel mais nickel)

```
git ls-remote --heads origin
```

Tu dois voir `refs/heads/Dev` pointer vers `6272027....`

Colle-moi la sortie de `ssh -T git@github.com` après l'ajout (juste ça), et je te confirme que l'auth est OK avant même de pousser.

You have successfully added the key 'DESKTOP-S95K8U0'.

Parfait  Ta clé est bien ajoutée à GitHub.

Maintenant fais exactement ces 2 commandes dans Git Bash :

```
ssh -T git@github.com  
git push -u origin Dev
```

Puis vérifie que `origin/Dev` a bien reçu ton commit `6272027` :

```
git ls-remote --heads origin
```

 Résultat attendu : `refs/heads/Dev` doit afficher un hash qui commence par **6272027** (ou exactement le hash complet correspondant à ton commit).

```

github.com:Mariogit20/PORTFOLIO-cv-MARIO-5.git 6f386ea..6272027 Dev -> Dev branch 'Dev' set up to track 'origin/Dev'.
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $
```

Yes 🎉 c'est **bon** !

Tu as maintenant :

- SSH OK : Hi Mariogit20! You've successfully authenticated...
- Push OK : Dev -> Dev avec 6f386ea..6272027
- Branche suivie : branch 'Dev' set up to track 'origin/Dev'

## Vérification rapide (si tu veux)

```
git status
git log --oneline --decorate -5
git ls-remote --heads origin
```

Tu devrais voir :

- Your branch is up to date with 'origin/Dev'
- et refs/heads/Dev pointant vers **6272027** (ou son hash complet)

## Petit conseil important (pour “tout garder”)

Tu as commité **db.sqlite3** + beaucoup d'images + des .pyc / \_\_pycache\_\_.

Ça marche, mais sur GitHub ça peut vite gonfler le repo.

Si tu veux, je te propose une .gitignore “propre Django” **sans rien supprimer de ton repo actuel** (juste pour les prochains commits).

```

6272027f2991231c13ca419988741f322a2c37d9 refs/heads/Dev e9a0d2c86adb2cacab065f4372b4b65dbb27425d refs/heads/Test
```

e9a0d2c86adb2cacab065f4372b4b65dbb27425d refs/heads/main AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO  
HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) \$

Parfait  Tout est nickel :

- **Local = Remote** : HEAD -> Dev, origin/Dev sur le même commit **6272027**
- **Repo propre** : working tree clean
- **Remote OK** : refs/heads/Dev pointe bien vers **6272027f...**

Donc ton projet est bien poussé et synchronisé sur la branche **Dev**.

Si tu veux la suite la plus logique :

- soit tu continues à bosser sur **Dev**
- soit tu fusionnes **Dev → main** via une Pull Request sur GitHub (pour avoir la version “stable” sur `main`).

tu fusionnes Dev → main via une Pull Request sur GitHub (pour avoir la version “stable” sur main)

OK — voilà exactement comment faire la **Pull Request Dev → main** sur GitHub (et rendre `main` “stable”).

## 1) Vérifie que Dev est bien à jour (chez toi)

Dans ton terminal (tu es déjà sur Dev) :

```
git checkout Dev
git push -u origin Dev
```

(Si ça dit “Everything up-to-date”, c'est bon.)

## 2) Crée la Pull Request sur GitHub

1. Va sur ton dépôt GitHub **PORTFOLIO-cv-MARIO-5**
2. Clique l'onglet **Pull requests**
3. Clique **New pull request**
4. En haut tu choisis :
  - o **base:** `main`

- **compare:** Dev
5. Clique **Create pull request**
  6. Mets un titre (ex: *Merge Dev into main*) puis **Create pull request**

## 3) Fusionne (Merge)

Sur la page de la PR :

1. Clique **Merge pull request**
2. Confirme **Confirm merge**

## 4) Mets à jour ton main local (important)

Après la fusion, dans ton terminal :

```
git checkout main  
git pull origin main
```

## 5) Optionnel mais conseillé : remettre Dev à jour avec main

```
git checkout Dev  
git merge main  
git push
```

Si tu me dis ce que tu vois dans GitHub au moment du merge (bouton “Merge” dispo ou conflits), je te dis quoi faire dans le cas exact (conflits / fast-forward / etc.).

```

/d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (main) $
```

Parfait  D'après ce que tu montres, la fusion Dev → main a déjà été faite sur GitHub, et tu viens de récupérer main en local :

- git pull origin main a fait un **Fast-forward** de e9a0d2c → 9946b49 
- Et tu vois bien que main contient maintenant les **370 fichiers / 14464 insertions** (donc le gros commit est arrivé sur main) 

## Vérification rapide (pour être 100% sûr)

Lance ces 2 commandes dans ton terminal (tu es sur main) :

```
git log --oneline --decorate -5
git status
```

Tu dois voir :

- origin/main et main sur le **même commit** (probablement 9946b49 ...)
- working tree clean

## Ensuite : remettre Dev “aligné” sur main (conseillé)

Comme `main` a avancé, tu peux remettre `Dev` au même niveau :

```
git checkout Dev  
git merge main  
git push
```

Si Git dit "Already up to date", c'est parfait.

## Bonus (hygiène Git pour éviter ce genre de souci)

Tu avais plein de `__pycache__`, `.pyc`, et `db.sqlite3` dans le repo : c'est souvent mieux de les ignorer.

Tu peux améliorer ton `.gitignore` plus tard (et retirer ces fichiers du suivi si tu veux).

Si tu me colles la sortie de `git log --oneline --decorate -5` sur `main`, je te confirme noir sur blanc que `main` contient bien le commit `first commit` (6272027) ou un commit de merge équivalent.

```
AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (main) $ git log --oneline  
--decorate -5  
git status 9946b49 (HEAD -> main, origin/main, origin/HEAD) Merge pull request #1 from Mariogit20/Dev 6272027 (origin/Dev, Dev) first  
commit 6f386ea Ajout gitignore e9a0d2c (origin/Test, Test) Initial commit On branch main Your branch is up to date with 'origin/main'. nothing to commit,  
working tree clean AzureAD+SPSSE02MEN@DESKTOP-S95K8U0 MINGW64 /d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (main)  
$
```

 Nickel : c'est confirmé.

- 9946b49 (HEAD -> main, origin/main) = **Merge pull request #1 from Mariogit20/Dev**
- Et juste en dessous tu as 6272027 (origin/Dev, Dev) first commit → donc le contenu de Dev est bien **dans main** via la PR.
- `git status` : *up to date + working tree clean* 

## Ce que tu peux faire maintenant (proprement)

### 1) Remettre `Dev` à jour sur `main` (recommandé)

Comme `Dev` pointe encore sur 6272027, tu peux l'avancer au niveau de `main` :

```
git checkout Dev  
git merge main  
git push
```

Après ça, Dev et main seront alignées.

## 2) (Optionnel) supprimer la branche test si elle ne sert plus

Sur GitHub (Branches) ou en ligne de commande :

```
git push origin --delete Test  
git branch -d Test
```

(Et si Git refuse -d, tu peux faire -D si tu es sûr.)

Si tu veux, je te donne aussi une **.gitignore propre Django/Python** pour éviter de versionner `__pycache__`, `*.pyc`, `db.sqlite3`, etc.

```

/d/PYTHON DJANGO HOPES/github14/PORTFOLIO-cv-MARIO-5 (Dev) $
```

 Parfait : maintenant **tout est clean et aligné**.

## Ce qui s'est passé (et c'est OK)

1. Ton `git push` en HTTPS échouait avec **HTTP 408** (timeout).
2. Tu as basculé en **SSH**, généré une clé, ajouté la clé à GitHub →  authentification OK.
3. Le push a réussi, puis tu as fait :

```
git checkout Dev
git merge main
git push
```

Résultat : **Dev a été “fast-forward” sur main** → `Dev` et `main` pointent maintenant sur le même commit (9946b49). 

---

## Vérification rapide (si tu veux confirmer)

```
git branch -vv
git log --oneline --decorate -3
```

Tu devrais voir `main` et `Dev` sur le même hash.

---

## Prochaines actions conseillées (important pour un projet Django)

## 1) Ne versionne pas les fichiers inutiles/risqués

Tu as versionné plein de trucs qui devraient *généralement* être exclus :

- `__pycache__` / et `*.pyc`
- `db.sqlite3` (souvent à ne pas committer)
- `.vscode/` (selon le choix)
- fichiers export `.json` (selon sensibilité)
- gros fichiers médias (images multiples)

→ Mets à jour ton `.gitignore` (et idéalement retire du suivi Git ce qui est déjà committé) :

```
git rm -r --cached **/__pycache__ *.pyc 2>/dev/null  
git rm --cached db.sqlite3 2>/dev/null  
git commit -m "Ignore cache/DB files"  
git push
```

(Sur Windows Git Bash, le `**` peut dépendre du shell. Si ça bloque, on fera avec `find`.)

## 2) Branche Test

Si `Test` ne sert plus (elle pointe sur `e9a0d2c`), tu peux la supprimer :

```
git push origin --delete Test  
git branch -d Test
```

---

Si tu me dis ton objectif exact (ex: “je veux bosser uniquement sur Dev puis PR vers main” ou “je veux une seule branche main”), je te donne la **stratégie Git la plus simple** + les commandes propres.

Juste une question : Si on suppose que je me trouve sur la branch Dev alors quelle commande github dois je taper pour me déplacer à la branch main

Si tu es sur `Dev` et tu veux passer sur `main`, tape :

```
git checkout main
```

ou (commande plus récente) :

```
git switch main
```

Et pour vérifier où tu es après :

```
git branch
```

Autre question : Si je voudrais déplacer un fichier voiture

Tu veux dire **déplacer un fichier dans ton projet (sur ton PC)** puis l'enregistrer dans Git/GitHub ?

## 1) Déplacer le fichier (ex: voiture / voiture.py / voiture.jpg)

- Sous **Git Bash** (Windows) :

```
git mv voiture chemin/nouveau_dossier/
```

git mv c'est l'idéal : ça déplace **et** Git comprend le renommage/déplacement.

Exemples :

```
git mv voiture.png static/images/
git mv voiture.py app_acceuil/
git mv "voiture dossier/voiture.txt" docs/
```

## 2) Commit + push vers GitHub

```
git status
git commit -m "Déplace fichier voiture"
git push
```

---

Si tu me dis :

- le **nom exact** du fichier (avec extension),
- et **où tu veux le mettre** (le dossier cible),  
je te donne la commande exacte prête à copier-coller.
